View of the village of Sedanka, early 20th century.

The development of trade gave rise to the exploitation of the Itel'mens by merchants. These gave the Itel'mens goods on credit, often against their will; then, if the debt was not paid in time, they doubled or tripled the sum. Often, an Itel'men would have to pay as long as he lived for some small article, such as a knife. This type of trade did not disappear even after the formation of the Russo-American Company (1799). The company sold its wares at prices 10 times higher than their actual value. By the 1860's, the indebtedness of the Itel'mens to this company had risen to the grandiose sum of 150,000 rubles. 175 439 426

The Itel'men economy remained essentially subsistence. The fishing catch went solely for the satisfaction of the fishermen's needs, and none of it was sold. The only articles that had commodity value were furs. Villages were governed by elders, elected by the villagers and approved by the Russian administration. Very often the post of elder was hereditary. Survivals of clan organization were preserved among the Itel'mens until the 20th century. These included elements of collective production and distribution of food products—collective fishing by means of fishtraps, collective seal hunting, division of the carcass of a whale cast up on the shore, the custom of mutual aid, etc. 175 [433] [622] [648] [178] [614] [476]

The first efforts at introducing agriculture were made after the founding of a monastery (the Uspenskaya Pustyn') on Kamchatka, in the first quarter of the 18th century. In the 1740's the first group of Russian peasants was resettled in Kamchatka. Further groups of settlers followed, but agriculture enjoyed small success. The administrative method of introducing agriculture among the Itel'mens could yield no appreciable results with the primitive agricultural techniques of that time. The products of agriculture therefore held a small place in Itel'men economy. Gardening was more successful. In the second half of the 19th century, all Itel'men villages had small gardens, producing potatoes, turnips and horse-radish. But even this gardening was negligible in scope and extremely primitive. The natives were unskilled in tending plants; they dug the soil with wooden hoes, did not know about watering, and so on. 175 648 241 [792]

Cattle were first brought to Kamchatka in 1733, and again, from time to time, in succeeding years. The livestock was kept grazing all year; there was little preparation of hay. Horses were also left to their own devices, and became so wild that they were difficult to catch. They were used chiefly in autumn as riding and pack animals. Wheel transport, such as the cart, 175 648 231
